AMIS

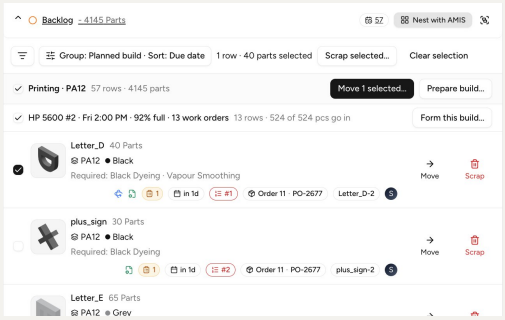

AUTOMATED NESTING FOR MJF AND SLS

From backlog to nested build.

Send your backlog from Phasio to AMIS. Review the nested builds when they return, then approve them for production.

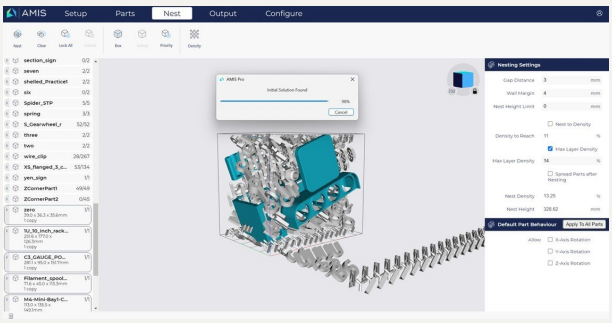

01 Start with your backlog

Phasio keeps each part's production history and instructions. Select "Nest with AMIS" to send the backlog for nesting.

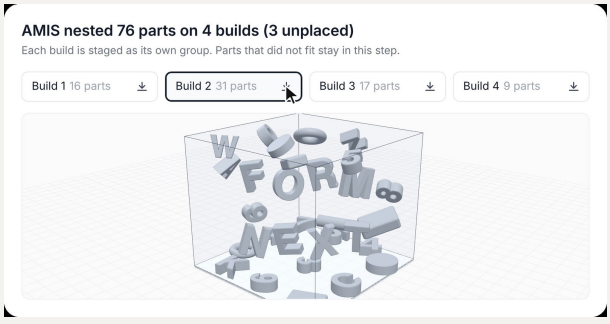

02 Let AMIS do the nesting

AMIS Runtime nests the parts in the background using your scripts. Your process stays repeatable and under your control.

03 Review. Then approve.

Nested builds return to Phasio. Check each build and any unplaced parts before approving production.
